

ASPEN SLIM PRE-DRILL DISPLAY

Product Features

The Aspen Slim has a profile width of 19mm (.75"), making this single-sided SEG extrusion the thinnest of them all. Less than half the profile width of Aspen-40, the outside finish is solid and smooth aluminum. This extrusion is especially lightweight, making it great for wall mounting. Holes are pre drilled in the frame to mount directly to the wall, so wall mounts are not needed. When installing the fabric graphic, the silicone beading can fit 12mm (.47in.) deep and 3mm (.11 in) wide into the trough of the frame. Not compatible with lights (cannot be backlit).
